*“The Arikus inContext™ sdk has been able to surpass all other search vendors’ offerings with its unbeatable combination of performance, accuracy, available features, and value. In addition, the Arikus team has been extremely responsive in terms of both support and accommodating our requests for new functionality. A truly outstanding package.”*

—Scott Pittman, CTO, LLM Inc.

### Company Background

LLM, Inc. provides a turnkey solution that allows attorneys to practice law without worrying about the various components of case management. With LLM’s turnkey solution, LLM ensures that a legal firm’s documents are collected, scanned, loaded and hosted properly and in an efficient, cost-effective manner.

LLM’s flagship product is Liquid Lit Manager™. With its ability to associate related materials, Liquid Lit manager is an innovative product in the litigation field that is designed to empower and help legal firms find the right information - faster. Liquid Lit Manager is accessed through a standard Web browser, providing access to key documents 24/7.

### The Need

Without an adequate solution in place, a legal firm’s lawyers would have the overwhelming task of physically searching thousands of files for critical evidence to support clients’ positions in a trial case. Firms’ lawyers had to look in multiple places to research responses for similar questions. LLM needed a better way to get their clients’ lawyers the right information to best prepare for trial.

### The Solution

The Arikus inContext™ (sdk) search engine software is instrumental in helping litigation counsel search and retrieve thousands of documents. Legal staff is able to dig through massive amounts of email and documents produced after the close of discovery and in conjunction with trial.

inContext™ provides lawyers with a single point of access across disparate resources and heterogeneous data types. inContext™’s approach to guided search provides lawyers with the ability to explore and discover tangential relations between concepts.

### The Benefits

Arikus helps LLM provide lawyers with the ability to find documents accurately with use of plain language, Boolean, proximity and fuzzy features. inContext™ can sort documents into useful groups for witness, deposition, hearing, and trial preparation. inContext™ helps legal firms find the right information - faster.
